

# CHALLENGER TECHNOLOGY SOLUTIONS

## CAPABILITY STATEMENT

### Mission Statement/Overview

Darryl Challenger Technology Solutions was founded in 2018. I build custom software solutions for my clients when out-of-the-box solutions don't exist. I specialize in cloud-based software development primarily using C# and JavaScript on the Azure stack. I have experience with e-commerce integration and automation including eBay and MWS. I use my extensive background from the Financial Industry as a Software Developer, Software Delivery Manager, and Project Manager to partner with my clients offering customized solutions that enhance automation and improve business processes. I focus on my clients and always behave with integrity - their goals are my primary concern: I help them analyze their needs and realize their goals.
